NO Ordinary Jewels

# M

## MAGMALAB

MagmaLaB is an artisan laboratory founded in 2011, from the initial idea of designing and creating artistic artefacts from various waste materials, using exclusively artisanal techniques. The turning point came in 2014, with the *Aquamadre* project, aimed at experimenting with the creative potential of recycled plastics, first and foremost polyethylene terephthalate (PET). In the following years the project evolved, focusing on the design and creation of contemporary jewellery, starting from these materials: commonly used plastics with surprisingly eclectic aesthetic and structural characteristics and with great lightness and brightness.

Today, thanks to much study, experiments and the many collections created, the MagmaLaB brand has become synonymous with **jewellery of research**, with an **innovative design**, the result of the **conscious choice** to create while preserving the planet's resources.

## SHADES and COLORS

Initially the colors present in the catalogs were those of the "original" raw material. In recent years, however, we have developed new techniques and enriched the color palette at our disposal. To do this, we chose to work in an almost "painterly" way, using pigments on a neutral base, which allowed us to obtain new colors and shades or to insert contrasting color points.

## HOW TO TELL US?

*We are strange, some would say "different". And we make jewellery, with our - which wouldn't exactly be defined little - hands. And we make them by imagining them on others, because we don't wear them ourselves. And we make them with a strange, some would say "different", material. But we study it, we work on it, we transform it, we evolve it. And we simply create projections of our souls that become jewels, which tell us that, in the end, there is nothing different, indeed, everything. And that's the beauty of it. And it's so natural.*

## CATALOGUE

new line

## LUNARIA

*The Lunaria line describes a borderland, where nature and the cosmos mirror each other.*

The botanical reference is to the *Lunaria annua*, with its slender, luminous fruits, whose circular shapes emerge lightly, like vegetal traces transformed into symbols.

The astronomical imagery looks to the Moon and its orbits, a slow, constant movement that governs distances.

In the **Lunaria** and **Astra** models, the elements seem to float like small celestial bodies, following a silent rhythm. Between light and matter, between recovery and transformation, Lunaria gives shape to jewels that discreetly inhabit space, evoking a time that is both natural and cosmic.

**SEVERAL NEW COLOURS THIS SEASON** available in some of the new models presented.

Line LUNARIA

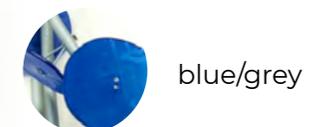

## LUNARIA

necklaces

- Materials:  
polyethylene, nylon,  
pvc, brass

- Colors available:

blue/grey

red/dark grey

white/white
